# WASTE- PRODUCT

1. Design of products. Apply similar procedure as the Machine Directive, from safety for man to impact on society. LCA based evaluation.
2. Low analytical detection limits and nothing is 100 %, results in "everything can be found everywhere".  $10^{20}$  atoms in 1 gram.
3. EoW and waste classification criteria based on risk and availability- not concentration.
4. EPR-system focus from collection and recycling rates to societal value. Reduce value drop and secure supply.
5. Legislation enforcement and control, predictable conditions a base for investments.
