

## Press Release

### **EuRIC supports ECOS's joint initiative to save the Ecodesign and Energy Labelling Package**

**Brussels, 27.09.2018**

EuRIC has co-signed a joint letter with more than 50 organizations to urge the European Commission not to delay or minimize the Ecodesign and Energy Labelling Package.

EuRIC sees the development of the Ecodesign and Energy Labelling Package regulations as an essential tool to promote the circular economy by improving the resource efficiency and the recyclability of electrical and electronic products, such as washing machines, dishwashers, household fridges, etc.

Important progress has recently been made under the framework of the Ecodesign Directive to ease the dismantling or improve the labelling of electronic appliances to facilitate their recycling, and further proposals linked to these developments should be adopted immediately.

EuRIC therefore urges the European Commission to keep their commitment with the ecodesign and the circular economy by adopting the [20 Ecodesign & Energy Labelling measures](#) without delay.

You can find more information about this initiative and download our joint letter [here](#).
